1	INTRODUCTION	1
	1.1 Introduction	1
	1.2 Research Background	2
	1.3 Problem Statement	5
	1.4 Research Objective	6
	1.5 Scope of Research	6
	1.6 Significance of Study	6

2	LITERATURE REVIEW	7
2.1	Literature Review	7
2.2	Nonlinear Behavior	9
2.3	Soliton Properties	11
2.4	Self Phase Modulation	11
2.5	The formation of Soliton	12
2.6	Soliton Classification	15
2.7	Spatial Soliton	15
2.8	Temporal Soliton	17
2.9	Dispersion	19
2.10	Group Velocity Dispersion	20
2.11	Diffraction	21
2.12	Dark Soliton	21
2.13	Bright Soliton	22
2.14	Waveguide	23
2.15	Ring Resonator	23
2.16	Chaos Phenomena	25
2.17	Coupler	26
2.18	Wavelength Division Multiplexer (WDM)	27
3	THEORY	28
3.1	Introduction	28
3.2	Evaluation of Soliton	29
3.3	Dark Soliton Array Generation	31
3.4	Transmitted and Inserted Electromagnetic Relation	33
3.5	Secured Communication	35
3.5.1	Resonance Bandwidth	35

3.5.2	Fitness	36
3.5.3	Free Spectral Range (FSR)	36
3.5.4	Quality Factor	37
4	METHODOLOGY	39
4.1	Security Confirmation Using Micro Ring Resonator	39
5	RESULT AND DISSCUSION	42
5.1	Dark Soliton Non-Linear Behavior	42
5.2	Signal and Chaos Generation	44
5.3	Fast and Slow Light Generation for Communication Security	45
5.4	Dark Soliton Array Generation via Multiplexer	47
6	CONCLUSION	50
6.1	Conclusion	50
6.2	Recommendation	51

LIST OF TABLE

TABLE NO.	TITLE	PAGE
1.1	Historical Review of Soliton	4

LIST OF FIGURES

FIGURE NO.	TITLE	PAGE
2.1	Spectral broadening of a pulse due to SPM	12
2.2	An optical soliton with a hyperbolic secant envelope	14
2.3	Focus of light by convex lens	16
2.4	Linear and non-linear effect on Gaussian pulse	18
2.5	Dark soliton pulse	22
2.6	Bright soliton pulse	22
2.7	Schematic diagram of FORR with a single fiber coupler	22
2.8	The output signal for varying number of ring passes	25
2.9	The chaotic of micro ring resonator at the radius $10\mu m$	26
3.1	Evolution of soliton in normal dispersion regime	29
3.2	Evolution of soliton in anomalous dispersion regime	30
3.3	Schematic diagram for a ring resonator coupled to a single waveguide	33
3.4	Transmission characteristic of single ring resonator	35
3.5	Factor depending on the finess for a specific radius R	38
4.1	Proposed system for secured communication purposes	40
5.1	Results obtained when dark soliton pulse is input into the micro ring resonator where, $R_1 = 10\mu m$, $A_{eff} = 0.50, 0.25 \mu m^2$, $\kappa_1 = 0.0009$,	43

5.2	The chaotic signal at R_1 (a) Input signal (b) Chaotic Signal	44
5.3	Fast and slow the light (a) Dark soliton input (b) Chaotic Signal (c) Slow light (d)Slow dark soliton (e)Bright soliton via add/drop filter	46
5.4	Multi dark soliton array generation	47
5.5	Simulation results of the dynamic optical trapping array with in micro ring and nano ring resonators, (a), (b) and (c) when the dark soliton input wavelengths are $\lambda_1 = 1.56$, $\lambda_2 = 1.58$ and $\lambda_3 = 1.60 \mu\text{m}$ respectively	48
5.6	Simulation results of the dynamic optical trapping array within micro ring and nano ring resonators, where multi-plex wavelengths are $\lambda_1 = 1.56$, $\lambda_2 = 1.58$ and $\lambda_3 = 1.60 \mu\text{m}$ into optical fiber.	49
